Findings

## ARTICLE XII INTERIM GROWTH MANAGEMENT

#### 12.001 Authority

This Interim Growth Management Regulation is enacted as a section of the Town of Milford's Zoning Ordinance pursuant to the authority granted by RSA 674:23.

#### 12.002. Findings

The Planning Board has determined that, and the Town hereby finds that, this interim regulation on residential development in Milford is necessary on the basis of unusual circumstances requiring prompt attention, including the following:

- A. The Town of Milford is facing severe residential development pressure. From January 1, 2000 through January 1, 2004, the Town's annual growth rate for single family homes was 3.1%, compared to an average of 2.6% for the other 12 Nashua Regional Planning Commission (NRPC) communities. For the same period, the Town's multi-family housing grew at an annual rate of 2.2%. Milford's percentage of multi-family housing units of its total housing units continued to far exceed the NRPC average (44.1% of total vs. 15.7% for the other 12 communities). Only Nashua has a greater percentage of multi-family housing units. From January 1, 2000 through October 1, 2004, the Milford Planning Board received development applications and/or informal approaches relating to the proposed development of more than 1,000 additional housing units (single-family, multi-family, and senior housing).
- B. Unless there is a substantial downturn in the overall housing market, Milford's unusually high rate of residential development is likely to continue.

  Improvements to the main traffic arteries linking Southern New Hampshire to Massachusetts (Route 3 and Route 93) will likely speed up regional integration, making Milford more accessible as a residential "commuter" community. There is a commonly held perception that much of the population growth in southern New Hampshire is due to a lesser tax burden than neighboring Massachusetts, causing inmigration into the southern New Hampshire tier. Milford, in comparison to many communities in the region, has lower land costs, high-density zoning districts served by town water and sewer (which can accommodate multi-family housing) and a more streamlined development process, which results in lower-cost housing. Milford has increased its attractiveness for residential development by seeking to maintain a traditional small-town feel while at the same time offering a full complement of

stores, restaurants, health care and other services. The preliminary findings of an ongoing buildout study for the Town indicate that there is a very substantial supply of land to accommodate the continued demand for residential development, with up to 6000+ new housing units able to be built under current zoning. This maximum buildout would more than double the current number of housing units in Milford.

- C. Milford increasingly stands out as a target for unusual residential development within the region because, in contrast to the majority of surrounding communities, Milford has not yet adopted a growth management policy. In New Hampshire, 40 towns, most of them in the Southern tier and including eight towns in Hillsborough County, have adopted growth management measures. Six of the twelve towns in the NRPC region have implemented growth management ordinances. Of the seven towns directly abutting Milford, four have adopted growth management ordinances and another recently proposed a growth management measure. Milford will likely come under even greater development pressure unless the Town also takes steps to catch up with its neighbors and address the issues of growth.
- D. Rapid and unmanaged residential development threatens the balance of community interests reflected in the Master Plan. The 1999 Master Plan update set the Town's planning philosophy as "a pro-active, organized and deliberate approach to enhance and protect the character and resources of the Town and Community for both present and future". Rapid and unmanaged residential development is inconsistent with this philosophy and threatens adverse effects on the Town's character and sense of community as well as increased burdens on already overstretched facilities, increased congestion, adverse effects to the tax base and increased taxes, and a decrease in the quality of life. Such growth may also threaten the balance between development and the preservation of open space, wetlands, agriculture, historical features and scenic vistas that form an important part of Milford's character. The draft buildout study indicates that approximately 8800 acres (approximately 62% of the Town's residentially-zoned land) remains available for residential development. Development of this land in accordance with current projections would create up to 6800 new residential units and would more than double the Milford's population to more than 30,000 residents. This huge scale of development, if left unmanaged, will almost certainly result in fundamental and unplanned changes to the character of Milford. Outlying undeveloped areas, even without the necessary infrastructure (roads and utilities) in place, are nonetheless under increased development pressure.
- E. There are several very large undeveloped parcels of residentially-zoned land in Milford that, if developed, could result in "shocks" to the Town with extreme pressure on facilities, services and quality of life. These parcels, particularly if

two or more of them are linked together, could support developments of up to several hundred new homes or residential units. Such massive developments could put an immediate and unworkable strain on community facilities. For example, the preliminary findings of an ongoing cost of services study indicate that a single large development of 300 new residential units would likely, by itself, cause an increase of 10% or more in the enrollment in the Milford schools, which would require a crisis program to increase school facilities.

- F. Development pressures in Milford threaten public facilities and services that are already strained. A comprehensive facilities assessment and development plan for the Town has yet to be prepared, but there are important areas where public facilities are clearly inadequate to meet current demand let alone demand generated by future residential growth. For example, based on Fall 2004 enrollment Milford's Middle School is operating at 25% over-capacity. There is an extreme shortage of classroom space. The Milford School Board has been struggling for the last five years to present an acceptable solution to Town voters to alleviate overcrowding at the Middle School. This has not been successful even though the pressures from enrollments and program needs continue to increase. The School Board has stated that a plan to resolve the space problems at the Middle School must be in place no later than the 2006-2007 school year.
- G. Unmanaged residential development may add to Milford's disproportionately high property tax burden. The 1999 Master Plan update identified that growth in residential development in Milford can be substantially tax-negative (i.e., the taxes paid by owners of new homes do not, on average, cover the cost of town and school services the residents in these homes consume). Milford's property taxes are high on an absolute basis, high in comparison to the surrounding towns and have grown rapidly. From 2000 to 2004, property taxes increased 22%, with the town services component of the tax bill up 30%. The overall increase in property taxes is almost double the rate at which New Hampshire personal incomes grew during the same period, which means the "tax bite" (taxes as a percent of income) has likely worsened substantially for the average Milford resident. For a family living in a home assessed at \$175,000 at the start of the period, taxes jumped more than \$1,000 over the four years and are now approximately 2% of current market value (i.e, in a single year a family must pay 2% of the current market value of their home in property taxes). Residential growth can have an important impact on property taxes, and the Town has launched, but not completed, a study to measure and assess the extent to which new residential development may create an additional tax burden for Milford residents.
- H. The Planning Board needs "breathing room" to develop and propose to the Town a carefully considered and well-designed growth management policy that will balance community interests and take regional interests into account. Because of the large number of subdivision and site plan applications that the Planning Board must consider each month, there has been little time left for the Planning Board to focus pro-actively on developing a growth management policy for

the Town. During 2003 and 2004, the Planning Board, assisted by the Town's Planning Department, began the process of assembling the data necessary to analyze the Town's growth trends in detail, make comparisons with the surrounding communities, and help define the directions a growth management policy for the Town might take. During 2004 the Planning Board launched a comprehensive buildout study for the Town and commissioned a cost of services study to determine the extent to which new residential development may increase the tax burden on residents. Good progress has been made, but an additional year is needed for the Planning Board to complete this work (data development, analysis, buildout study, cost of services study, and potentially Master Plan update) and develop a growth management policy that can be presented to the Town in the form of specific proposed zoning amendments that appropriately take into account and balance community interests and regional interests and preserve the character and natural resources of the Town.

I. This Interim Growth Management Regulation is necessary to address the unusual development pressure and other circumstances facing the Town and to give the Planning Board a temporary period, defined below, to develop a growth management policy. Because the Town continues to face unusual development pressure in the circumstances described above, this Interim Growth Management Regulation is necessary to maintain a level of management of new residential growth during the period the Planning Board is completing its work on an overall growth management policy.

## 12.003. Purposes

The purposes of this Regulation are:

- A. To promote the orderly development of land within the Town and to promote the public health, safety and welfare of the residents of the Town.
- B. To allow time to complete the development and analysis of data and the major studies relating to the Town's growth that were launched by the Planning Board in 2004, including the cost of services study and the buildout study.
- C. If necessary or appropriate in the judgment of the Planning Board, to allow time to complete an update of the key portions of the Town's Master Plan that relate to issues arising from growth and the timing of development, including the sections on vision, land use, community character and facilities
- D. If necessary or appropriate in the judgment of the Planning Board, to allow time to complete the necessary schedules and analyses so that additional categories of impact fees may be collected from new developments to help offset the cost of new facilities that accommodate the Town's growth, such as additions or improvements to the schools.

E. To allow time for the Planning Board, on the basis of the items referred to above and additional data, information and analyses, to develop a growth management policy that will be set forth in specific proposed zoning amendments that are intended to assess and balance community development needs, consider regional development needs and regulate and control the timing of development in the Town of Milford.

#### 12.004. Residential Subdivisions and Residential Site Plan Review

- A. During the period when this Interim Growth Management Regulation is in effect, the Planning Board shall not entertain or accept preliminary discussions or applications for any residential subdivision or for any residential site plan review, except as provided in paragraph B. below.
- B. The provisions of paragraph A. above shall not apply to:
  - a. Lot line adjustments as defined in Section 3.011 of the Town's Subdivision Regulations (i.e., exchange or transfer of land between existing lots without the creation of a new lot).
  - b. Minor subdivisions as defined in Section 3.012 of the Town's Subdivision Regulations (i.e., the creation of not more than two new lots in addition to an existing lot from which the subdivision is made), provided that (1) the applicant has owned the lot being subdivided for at least one year and (2) the applicant makes a binding commitment not to further subdivide any of the lots involved in the subdivision during the effective period of this Interim Growth Management Regulation.
  - c. Developments which have been presented to the Planning Board after December 1, 2003 and prior to December 1, 2004, during a regular meeting and with notification of abutters, as part of preliminary subdivision review or preliminary site plan review prior to the formal acceptance of the subdivision or site plan application.
- C. For the avoidance of doubt, the provisions of paragraph A. above shall not apply to commercial or industrial development.

#### 12.005. Building Permits Not Limited

A. This Interim Growth Management Regulation shall affect the issuance of building permits only for those lots or sites that are subject to paragraph A. of Section 12.004 (i.e, lots or sites that require subdivision or site plan approval, are not exempted by paragraph B. of Section 12.004 and are not grandfathered as described in paragraph B. below).

B. For the avoidance of doubt, this Regulation will not affect the issuance of building permits for (1) lots of record shown by deed prior to the effective date of this Regulation, (2) lots included on subdivision plans recorded prior to the effective date of this Regulation, (3) lots or sites on any subdivision or site plan application which has been accepted by the Planning Board prior to the effective date of this Regulation, and (4) lots or sites on any subdivision or site plan that has been approved by the Planning Board prior to the effective date of this Regulation and remains in compliance with RSA 674:39.

#### 12.006. Administrative Procedures

The Planning Board is hereby authorized to establish such administrative procedures, if any, as the Planning Board may deem necessary or appropriate to implement this ordinance. All such procedures shall be posted.

#### 12.007. Appeals and Variances

Appeals and variances shall be handled in accordance with the Town of Milford Zoning Ordinance.

#### 12.008. Conflicts

Where the provisions of this Regulation may conflict with the provisions of any other ordinance or regulation, the more restrictive provisions which impose the higher standard shall control.

## 12.009. Severability

Should any part of this Regulation be held invalid or unconstitutional by a court, such holding shall not affect, impair or invalidate any other part of this Regulation, and to such end, all articles, sections and provisions of this Regulation are declared to be severable.

## 12.010. Adoption and Amendment

This Interim Growth Management Regulation may be adopted or amended in accordance with the procedures set forth in RSA 674:23.

#### 12.011. Effective Date

This Interim Growth Management Regulation shall be effective from the date of posting of this Regulation (December \_\_\_, 2004) and, if adopted by the Town, shall remain in effect until 11:59 p.m. on March \_\_\_, 2006.

#### **APPENDIX**

## RSA 674:23 Growth Management; Interim Regulation

- I. In <u>unusual circumstances requiring prompt attention</u> and for the purpose of <u>developing or altering a growth management process under RSA</u>

  674:22, or a <u>master plan or capital improvements program</u>, a ... town ... may adopt an ordinance imposing interim regulations upon development as provided in this section.
- II. An interim regulation may be proposed by the planning board if it determines that the requirements of paragraph I exist and makes findings of fact so indicating. Any such proposal shall be submitted to the local legislative body as a zoning ordinance and shall be subject to all procedures and provisions relative to the enactment of zoning ordinances except that:
  - (a) There shall be at least one hearing on the interim regulation held by the planning board at which parties in interest and citizens shall have an opportunity to be heard. At least 10 days' notice of the time and place of the hearing shall be published in a paper of general circulation in the municipality, and a legal notice of the hearing shall also be given in accordance with RSA 675:7. ...
  - (b) The local legislative body shall act upon the proposed interim regulation not later than <u>90 days after the posting</u> of the notice for the public hearing under subparagraph (a).
- III. An interim regulation adopted under this section shall expire at the earliest of the following occurrences: one year after its adoption by the local legislative body; such earlier time as specified in the ordinance; or upon the effective date of an ordinance adopted under RSA 674:22 which addresses the unusual circumstances.

2) Does not include 55+ housing or 62+ housing.

## **Executive Summary**

#### Introduction

During the summer of 2004, the Milford Department of Planning & Community Development performed a build-out analysis. The purpose of the build-out analysis was to provide the Town and the public with information needed to make informed decisions regarding the impact of future population and housing growth. The findings are contained in the Town of Milford Build-out Study, October 2004.

## Build-out process

The Department assembled the best available tabular, textual, and geographic information system (GIS) data to perform this analysis. This included property parcel data as well as extensive information relating to development, environmental conditions, and land conservation.

This data was augmented by the original Residential Buildout Analysis developed in 1997 by Keene State College under the guidance of the Department of Planning & Community Development.

Creation of the accurate baseline model, in which numerous constraints layers, each representing a single overlay characteristic (conservation lands, steep slopes) were aggregated to produce a constraints composite. This composite provided a picture of all buildable land, and was overlaid with a Town zoning layer to determine how much development would be permitted by existing regulations in these remaining lands. More than 15 layers of spatial information were assembled to perform this composite and to complete the analysis. The Department worked extensively with the Nashua Regional Planning Commission and the Milford Assessing Department to assure the accuracy of component data layers and to establish the relationships between spatial attributes and build-out potential.

## Build-out findings

Land areas determined to be developable were tabulated against Milford's three different residential zoning districts and permitted use types to arrive at totals for remaining residential development capacity. Several of the primary findings of this study are:

- Approximately 8,800 acres of buildable vacant and underdeveloped residential zoned land area remains in Milford out of a total land area of 16,500 acres.
- Over 6,800 new residential lots could be built on this land under current Milford zoning rules.
- Over 7,000 additional dwelling units (single- and multi-family) could be constructed on those lots, adding to the 5,823 units as of 2003.
- ➤ If historical development trends continue, Milford will reach build-out of its remaining residential capacity within 50 years, or by 2050.

Interim Growth Management Findings of Fact 11/09/04 -1The Build-out Study elaborates on this process and its outcomes in extensive detail. This document and the attendant data, software and mapping products produced for the build-out analysis will be a significant tool for ongoing comprehensive planning initiatives in the Town of Milford.

The full set of details describing inputs and outputs are available in the appendices to this report.

#### **MEMO**

TO:

Planning Board

FROM:

Bill Parker, Planning Director

RE:

Status Report on Planning Initiatives – Master Plan and

Regulatory

The following memo is intended to present a status report on master plan and regulatory initiatives undertaken by the Planning Board in the last 5 years. The Milford Planning Board last updated the town Master Plan during 1998 and 1999, and the Board adopted the 1999 Master Plan Update on October 19, 1999. This was a significant effort and involved many community members. Since that time there has been significant progress made in implementation of the Plan's recommended actions, including, but not limited to:

- Initiation of revisions to the Town sign ordinance

- Adoption and implementation of open space subdivision regulations

- Implementation of increased communication between governments, boards, citizens

Adoption of regulations for wireless communication

- Adoption of adult entertainment regulations

- Study and recommendations on the Town's form of government

- Initiation of an Osgood Pond management plan

- Implementation of trail easements and building along the Souhegan River and other specified trail corridors

- Initiation of stormwater management programs

- Initiation of and action from a Facilities Master Plan Committee

- Formalizing the CIP process on an annual basis

- Taken major actions to master plan the BROX property, both for industrial uses and community uses.

In spite of the lengthy list of above accomplishments, there are still *significant* areas that must be addressed by the Planning Board relative to the community Master Plan, both from 1999 recommendations and in areas that need attention in order to anticipate the demands of existing and future growth. Many of these are required by State statute (RSA 674:2, which states the master plan should be updated at intervals not to exceed 5 years), including:

- Preparation of a Facilities Master Plan (ongoing work of FMPC)

- Completion and adoption of a town-wide Transportation Plan (building on ongoing work of the NRPC and the 2001 town-wide traffic study)

- Updating the Community Character section of the Master Plan

Developing and adopting a Housing Section of the Master Plan.

- Reviewing and revising subdivision and site plan regulations that reflect current development requirements and master plan recommendations.

- Analysis of the results of the Cost of Services Study and November 2004 Build-Out Study.

The list in the paragraph above is not meant to be all-inclusive, and there may be other areas that need attention. However, it is the recommendation of this Department that the Board review the list above and determine a schedule in which to address these items.
